IUID Team Excellence Award

Press Release
March 2011

US Army **Soldier Sensor and Laser Team**

The US Army Soldier Sensor and Laser Team were the recipients of the IUID Team Excellence Award, presented during the March 2011 UID Forum. Team members include Colonel Stephanie Foster, Mr. Lloyd Luedtke, Mr. Joe Pearsons, Ms. Tia Cox and Mr. Joshua Baker. This team was nominated by Colonel Jake Wayman.

This team completed a Lean Six Sigma project to improve the rate that units accept property transfers. This modified process included uploading Unique Item Identifier (UII) data from Wide Area Workflow (WAWF) receiving reports into internal asset tracking systems. From the internal asset tracking system, the information is transferred to the Army's property accounting system.

This effort resulted in a change from 0% UII information in property transfer records to over 99% same day acceptance. In addition, over 99% Item Unique Identification (IUID) data flow for over 27,000 items in a few months.

By streamlining the processes of property transfers within the US Army by leveraging Item Unique Identification Information, allows the US Army to achieve a more efficient process, leading to cost avoidance and increased warfighter readiness.

"In recognition of your commitment to progressing IUID by incorporating Lean Six Sigma for property management."
